

Pradyuman

Software Engineer (Backend & Systems) — Go, Rust — Distributed Systems & Storage

📞 +91-8219748551 ✉️ meetupradyuman@gmail.com [🌐 LinkedIn](#) [🌐 Portfolio](#) [🌐 GitHub](#)

SUMMARY

Backend and Systems Engineer specializing in high-performance distributed systems, storage, and observability. Built a Rust query engine and an OpenTelemetry control plane operating at production scale, with deep expertise in Go, Rust, and reliability-focused system design.

SKILLS

Languages & Systems: Go, Rust, C++, Python • Linux internals, Concurrency, Networking

Distributed Systems: Storage & observability systems, query execution, multi-tenancy, partitioning & replication

Databases & Streaming: PostgreSQL, ClickHouse, Cassandra, Redpanda

Infrastructure: Kubernetes, Docker, Terraform, GitHub Actions • OpenTelemetry, Prometheus, Grafana • AWS, GCP, Azure

EXPERIENCE

Microsoft

April 2026 – Present

Software Engineer II

Hyderabad, India

- Operate and maintain large-scale production AKS infrastructure across multiple regions, owning node-pool capacity, autoscaling, and node-image lifecycle for clusters supporting 100+ internal services.
- Improve reliability of production Kubernetes clusters by resolving failures in distributed logging pipelines and reducing pod crash loops caused by resource contention and connectivity issues.
- Optimize log collection by tuning Fluentd configurations, improving throughput and stability under high volume and frequent rotation.
- Lead production incident response — triaging alerts, performing root cause analysis, and coordinating fixes for critical failures.

CtrlB

April 2024 – April 2026

Senior Software Engineer → Lead Software Engineer

Bengaluru, Karnataka

- Core contributor to a high-performance data engine written in Rust, owning critical query execution paths and performance optimizations; reduced end-to-end query latency by 30% and significantly lowered crash frequency under sustained peak load by addressing memory and concurrency bottlenecks.
- Designed and owned backend services in Go for authentication, RBAC, and multi-tenant isolation, defining clear trust boundaries and enforcing tenant-level data separation for a unified lake architecture.
- Built the observability control plane responsible for lifecycle management of OpenTelemetry agents, enabling centralized configuration, upgrades, and policy enforcement across 100+ nodes in production environments used by multiple companies, while reducing configuration drift and operational toil.
- Provisioned a self-hosted Kubernetes cluster from first principles, defining networking, storage, and security baselines; reduced onboarding time from 4–5 hours to under 15 minutes through fully automated setup.

Middleware

Sept 2023 – Feb 2024

Senior Software Engineer

Ahmedabad, Gujarat

- Designed modular, reusable deployment workflows using Helm and Kubernetes manifests, enabling rapid and consistent agent provisioning across Kubernetes clusters.
- Built observability integrations for ClickHouse, Redpanda, and Cassandra, enabling teams to monitor performance bottlenecks, resource utilization, and failure modes in production systems.
- Automated CI/CD pipelines using GitHub Actions, improving release reliability and reducing manual deployment effort by 40%.

Gap Inc.

June 2021 – Sept 2023

Software Engineer

Hyderabad, Telangana

- Led OpenTelemetry adoption across a large AKS-based microservices ecosystem (100+ services), building a vendor-neutral observability layer to standardize metrics and logs.
- Led a production OS migration from RHEL to Oracle Enterprise Linux across critical workloads, achieving \$50K annual cost savings while maintaining SLA-grade availability and performance.
- Built infrastructure-as-code with Chef to standardize and enforce VM provisioning, improving security posture and configuration consistency across environments.

EDUCATION

National Institute of Technology (NIT), Hamirpur

2017 – 2021

Bachelor of Technology in Computer Science

Hamirpur, HP
