

Pradyuman

Backend & Systems Engineer — Go, Rust, C++ — Distributed Systems, Storage, Networking

📞 +91-8219748551 ✉ meetupradyuman@gmail.com [🌐 LinkedIn](#) [🌐 Portfolio](#) [🌐 GitHub](#)

SUMMARY

Senior Backend & Systems Engineer (4+ YOE) with end-to-end experience building distributed data platforms and high-performance backend systems in Go and Rust. Proven track record of improving system reliability and latency across storage, observability, and infra domains. Adept at leading small teams and driving architecture in high-growth startup environments.

SKILLS

Languages & Systems: Go, Rust, C++, Python • Linux Internals, Concurrency, Networking

Distributed & Storage: ClickHouse, Elastic Search, Object Store, Replication, Partitioning

Infra & Observability: Kubernetes, Docker, Terraform, GitHub Actions, OpenTelemetry, Prometheus, Grafana

Cloud: AWS, GCP, Azure

Engineering Focus: System Design, API Design, Performance Optimization, High Availability

EXPERIENCE

CtrIB

April 2024 – Present

Senior Software Engineer → Lead Software Engineer

Bengaluru, Karnataka

- Contributing to the core data engine written in Rust — implementing new features, optimizing query execution, and improving query latency by 30% while reducing crash frequency under peak load.
- Designed and engineered backend services in Go for authentication, RBAC, and multi-tenant data isolation, enabling a secure, unified lake architecture across multiple clients.
- Built and maintained the observability control plane to manage OpenTelemetry agents, automating configuration and deployment across over 100 nodes, eliminating about 80% of manual operations.
- Deployed a self-hosted Kubernetes cluster from scratch, reducing developer onboarding time from 4–5 hours to under 15 minutes through automated provisioning.
- Led and mentored a 3-member engineering team, conducting design and code reviews, driving architectural decisions, and increasing feature delivery rate by 25% through improved review and CI processes.

Middleware

Sept 2023 – Feb 2024

Senior Software Engineer

Ahmedabad, Gujarat

- Designed modular deployment workflows using Helm and Kubernetes manifests, enabling rapid agent provisioning across multi-tenant clusters.
- Integrated observability pipelines with ClickHouse, Redpanda, and Cassandra to achieve low-latency ingestion and high query throughput.
- Automated CI/CD workflows via GitHub Actions, improving release reliability and reducing manual deployment time by 40%.

Gap Inc.

June 2021 – Sept 2023

Software Engineer

Hyderabad, Telangana

- Drove OpenTelemetry adoption across a large-scale AKS deployment, building a vendor-neutral observability layer for 100+ microservices.
- Migrated infrastructure from RHEL to OEL, saving \$50K annually while maintaining SLA-grade availability and performance.
- Authored Chef cookbooks to standardize and harden VM provisioning, enhancing baseline security and configuration consistency.

PROJECTS

Mini-NFS Protocol Implementation | Rust | 🌐

Systems Project

- Built a custom NFS-like protocol over TCP to explore low-level networking and file transfer mechanisms, focusing on concurrency and protocol correctness.
- Implemented file server and client components in Rust using line-based command parsing and streaming byte-level I/O for reliable remote file access.

Mini Object Store (S3-like) | Golang | 🌐

Storage Systems Project

- Developed a lightweight, S3-compatible object store to understand internal metadata design and lookup strategies behind large-scale storage systems.
- Implemented core operations (PUT, GET, LIST) and a simple on-disk layout with metadata indexing for efficient object retrieval.

EDUCATION

National Institute of Technology(NIT), Hamirpur

Bachelor of Technology in Computer Science

2017 - 2021

Hamirpur, HP
